

ARCHITECTURAL DRAWINGS

Architects use different types of drawings to lay out the design of a building and describe how it will look when it is built. It helps them experiment with the best use for the site, and it also gives their clients an idea of what they will be getting.

The different types of drawings architects use include;

<p>Floor Plan Bird's eye view of the interior layout</p>	<p>Elevation A view of the outside of one side of a building</p>
	
<p>Three-dimensional rendering Can be hand-drawn or computer drafted. Can be black and white, or show colour, texture and form. Can be of the inside or outside</p>
