

## What is a Floor Plan?

A floor plan is a 2D drawing that shows a room as seen from above. Everything in a floor plan appears flat. Architects use floor plans to show what a room or building will look like. Anyone who draws (or drafts) a floor plan is called a draftsman.

Floor plans usually show the measurements (called dimensions lines) for how long things are in real life. In the example below, the back wall is 24 feet long in real life and the side wall is 30 feet long.
